Double-stranded cDNA was ligated to EcoRI adaptors, 5 cycles of PCR applied to the cDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pampl0 by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was constructed by David Krizman."

                                                                                                                                                                                                                                                                                                                                                                                                                                                              94
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      histologically-determined to be fully malignant prostate cancer cells. Double-stranded cDNA was lighted to EORI adaptors, 5 cycles of PCR applied to the cDNA with an adaptor-specific primer, and the resulting PCR product subcloned into pAMP10 by the UDG-cloning method (Life Technologies). Average insert size is 600 bp. NOTE: Not directionally cloned. This library was constructed by David Krizman."

with a modified polylinker; Plasmid DNA from the
normalized library NCI_CGAP_Pr22 was perpared, and ss
circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
985608-986759, 1101192-1101959, and 1217928-1220615).
Subtraction by Bento Soares and M. Fatima Bonaldo.

Claim 1; Fig 1A-C; 68pp; English.

This represents a human prostate-specific kallikrein (HPSK). A host cell rontaining an expression vector comprising the HPSK nucleic acid sequence can be used to produce the protein recombinantly. The HPSK products can be used for the diagnosis of conditions or diseases associated with expression of HPSK such as prostate carcinoma and benign prostate expression of HPSK such as prostate carcinoma and benign prostate hyperplasia. Agonists and antagonists which specifically bind to HPSK and modulate its activity can be used for the preparation of treatment of such conditions or diseases. The products can also be used for detection and drug screening, especially for the detection of prostate-specific kallikrein (PSK).
                                                                                                                                                                                                                                                                                                                                                         100

Example 1; Page 115-116; 141pp; English.

This sequence is encoded by a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as this protein sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     710

Polypeptides comprising immunogenic portions of prostate proteins -
used in a vaccine for the treatment of prostate cancer
Example 3; Page 107-108; 130pp; English.
The present sequence is an immunogenic portion of a prostate tumour
protein. The immunogen, or the DNA encoding it, can be used as a
vaccine for the treatment of prostate cancer. The immunogen was
isolated from a prostate tumour cDNA library obtained by subtracting
a prostate tumour cDNA expression library with a normal tissue cDNA
library.
The immunogen was serviced from the prostate cancer of the prostate tumour cDNA library with a normal tissue cDNA
library.
The immunogen immunogen was serviced from the prostate tumour cDNA library with a normal tissue cDNA

Example 1; Page 112-113; 141pp; English.

This sequence is encoded by a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as this protein sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   190

                                                                                                                                                                     Polypeptides comprising immunogenic portions of prostate proteins used in a vaccine for the treatment of prostate cancer Example 3; Page 105; 130pp; English.

The present sequence is an immunogenic portion of a prostate tumour protein. The immunogen, or the DNA encoding it, can be used as a vaccine for the treatment of prostate cancer. The immunogen was isolated from a prostate tumour cDNA library obtained by subtracting

Example 1: Page 117-118; 141pp; English.

This sequence is encoded by a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as this protein sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate

The present sequence is an immunogenic portion of a prostate tumour protein. The immunogen, or the DNA encoding it, can be used as a vaccine for the treatment of prostate cancer. The immunogen was isolated from a prostate tumour cDNA library obtained by subtracting a prostate tumour cDNA library with a normal tissue cDNA library.

CHKALL antagonists can be used to suppress excessive proteolysis and subsequent skin cell scaling, so may be administered to treat skin clisorders. They may also be used to suppress excessive cell disorders. They may also be used to suppress excessive cell proliferation, so can be administered to treat/prevent cancer, e.g. adenocarcinoma, leukaemia and melanoma. Antibodies specific for HKALL may be used directly as antagonists, or indirectly as a targeting or delivery mechanism for bringing pharmaceutical agents to HKALL-expressing cells. They are also useful to diagnose conditions/diseases characterised by HKALL expression and to monitor therapeutic interventions. The polynucleotide encoding HKALL, or complementary sequences, can be used to produce hybridisation probes, useful to detect polynucleotides encoding (e.g. cancers of the bladder, prostate) or monitor HKALL regulation during therapeutic intervention. Polynucleotides encoding HKALL are useful to produce antisense sequences for therapeutic administration to modulate/prevent HKALL expression e.g. to treat/prevent skin disorders or cancer as above.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ratio:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents human kallikrein, designated HKALL. HKALL (or fragments) can be administered therapeutically to increase proteolysis and subsequent skin scaling to treat/prevent skin disorders, e.g. eczema, psoriasis and scleroderma. HKALL has chemical and structural homology with human stratum corneum chymotryptic enzyme (thought to be involved in the proteolysis of intercellular cohesive structures necessary for desquamation, the process by which outer layers of skin are eliminated), and its expression in cDNA libraries was associated with tumour-associated tissues and skin cells. It can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disorders e.g. eczema, psoriasis and screen for antagonists useful to treat skin disorders and cancers Claim 1; Page 41-42; 6lpp; English.

Claim 1: Page 44-45: 55pp; English.

Human amyloid precursor protein protease (W05383) is involved in the processing or clearance of amyloid precursor protein to form beta-amyloid peptide. Its amino acid sequence was deduced from a cDNA clone (T39783) obtd. Irom a human lung library. Recombinant protease can be produced in transformed or transfected prokaryotic (partic. E. coli) or eukaryotic (partic. AV-120 host cells. It is used to develop products for the design and testing of cpds. useful for treating or preventing conditions associated with beta-amyloid peptide, esp. Alzheimer's disease.

Antibody against neuropsin - used in the treatment of Alzheimer's disease and epilepsy (Claim 1; Page 7; 9pp; Japanese. W10694 is a recombinantly produced human neuropsin protein. The main invention relates to an antibody against the neuropsin protein, in particular a claimed fragment of the neuropsin protein (see W10695 and features table). The antibody can be used to treat neurodegenerative disorders such as Alzheimer's disease and epilepsy. Sequence 260 AA;

Claim 1; Page 6-7; 9pp; Japanese.

Chis is the amino acid sequence of a novel mouse protein designated neuropsin. The encoding gene was isolated from a mouse hippocampal conversation of the encoding gene was isolated from a mouse hippocampal conversation of the gene (clone B41; T63254). This fragment was amplified using primers T63252-3. The primers were synthesised based on the serine protease domain of nerve growth factor (NGF) gamma. The screen isolated positive clones, of which colone NP5 contained the longest insert (this sequence). The protein has a molecular weight of acund 26 kD.

It has 43% homology with EGF-BP, 41% with NGF-gamma; 39% with NGF-alpha; diagnosts and treatment of cerebral diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Percent Similarity:

09-JUN-1997;
The present sequence represents a human serine protease (designated HGBAB90). HGBAB90 polypeptides and polynucleotides are useful for diagnosing susceptibility to diseases by detecting mutations in the HGBAB90 gene, and can diagnose diseases associated with HGBAB90 imbalance by determining HGBAB90 polypeptide expression levels. HGBAB90 polypeptides can be used to screen for agonists and antagonists, which can be used in treatment to activate (agonist) or inhibit (antagonist) HGBAB90 activity, in addition to direct administration of antisense sequences or soluble HGBAB90 polypeptides which competitively bind HGBAB90 ligands to prevent expression. Gene therapy may also be use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        598
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  197

HGBAB90 antibodies care useful for inducing an immune response to immunise and prevent diseases. Diseases that can be treated are pulmonary emphysema, arthritis, multiple sclerosis, peridontal disease, cystic fibrosis, respiratory disease, thrombosis, cancer, cachexia, angina, glaucoma, inflammatory disorders, osteoporosis, cardiovascular disorders such as hypertension, atherosclerosis disorders such as cardiac infarction and stroke, asthma, psoriasis, chronic neurodegenerative diseases such as Alzheimer's, Parkinson's and Huntington's, demyelinating diseases, AIDS immune deficiency, disorders of photoreceptor degeneration and lens cataract formation, organ transplant rejection, cataracts, restenosis, muscular dystrophy, renal failure, cerebral vasospasm, pancreatitis and diabetic nephropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Align seg 1/1 to: W87703 from: 1 to: 260

                                                                                                                    This polypeptide comprises human mature prostate-specific glandular kallikrein hK2. It is encoded by cDNA (see V06602) derived from human benign prostate hyperplasia (BPH) tissue RNA. The invention provides a diagnostic method comprising contacting antibodies that specifically bind to pro-hK2 (phK2, see W45396) or mature hK2 with a sample of physiological fluid from a human. The assay is based on the discovery that phK2 is detected in the supernatant of a prostate carcinoma cell line and that hK2 is present in human physiological fluid from prostate cancer cells. The method is useful for monitoring the treatment and/or prostate cancer in males that have BPH or a high grade prostatic neoplasia (HeCN) or whose family members have or had BPH, HPGN or a prostate cancer. Monitoring the presence and/or amount of hK2 complexes with plasma proteins may also be important in distinguishing between prostate cancer and BPH.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       _documentation_block:
